

## Hand Free Medical Breast Pump Adjustable Suction Speed Settings

Our Product Introduction

for more products please visit us on [oxygenconcentratormedical.com](http://oxygenconcentratormedical.com)

### Basic Information

- Place of Origin: China
- Brand Name: HY
- Certification: CE/FDA/UKCA/FC/ROHS
- Model Number: S21
- Minimum Order Quantity: 24pcs
- Price: 23USD ~ 25USD
- Packaging Details: OPP packing with 24pcs per carton
- Delivery Time: 5-8 Working days
- Payment Terms: T/T, Western Union, MoneyGram, D/P, T/T, L/C, D/A
- Supply Ability: 300000PCS

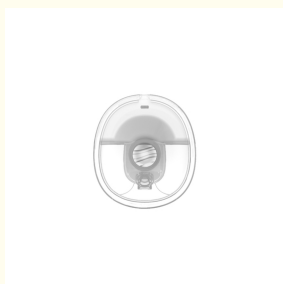

### Product Specification

- Model Number: S12
- Flow Velocity: Variable Flow
- Driven Type: Electric
- Size: 136\*111\*70 MM
- Levels: 9-12 Levels
- Charging Time: 2 Hours
- Highlight: **Hand Free Medical Breast Pump, Medical Breast Pump Adjustable**

## Medical Breast Pump - Adjustable Suction & Speed Settings

A medical breast pump with adjustable suction and speed settings is a device designed to help lactating individuals express breast milk. These pumps are commonly used by breastfeeding mothers who need to pump milk for various reasons, such as returning to work, maintaining milk supply, or addressing issues like engorgement or low milk production.

The adjustable suction and speed settings allow users to customize their pumping experience based on their comfort level and individual needs. Here's a brief overview of these features:

**Suction Settings:** The suction setting determines the strength or intensity of the vacuum applied to the breast during pumping. Most medical breast pumps offer adjustable suction levels, ranging from gentle to strong, to mimic a baby's natural sucking pattern. This feature allows users to find the suction level that is most comfortable and effective for them.

**Speed Settings:** The speed setting controls the rate at which the pump cycles, imitating the speed at which a baby nurses.

Some individuals may find a slower, more rhythmic cycle more effective, while others may prefer a faster cycle. Having the ability to adjust the speed allows users to find the setting that helps them express milk most efficiently.

The ability to adjust both suction and speed settings provides flexibility, as different individuals may have different preferences or requirements. It also enables users to mimic their baby's nursing pattern, which can help with milk production and letdown.

Additionally, some medical breast pumps may offer additional features that enhance comfort and convenience, such as different flange sizes to accommodate various breast sizes, a letdown mode to initiate milk flow, and memory settings to save preferred pumping patterns.

It's important to note that medical breast pumps with adjustable suction and speed settings are typically more advanced and may be pricier than basic consumer-grade pumps. If you are considering purchasing a medical breast pump, it's advisable to consult with a healthcare professional or a lactation consultant who can provide guidance on choosing the most suitable pump for your needs.
