Product introduction:

Atomizers are devices designed to treat upper respiratory diseases such as colds, fevers, coughs, phlegm, asthma, sore throat, pharyngitis, rhinitis, bronchitis, pneumonia and other diseases. The drug enters the respiratory tract by breath inhalation, goes directly to the diseased area, so atomization treatment is faster than oral medication. And because the drug goes straight into the respiratory tract, the maximum amount of dosing is only one-tenth of the oral method, significantly reducing the toxic side effects of the drug, especially in children and the elderly. Therefore, atomization treatment is effective and safe.
