What accessories are included in the box?

- Atomizer *1
- Instructions *1
- Connecting pipe *1
- Power cord *1
- Pouch *1
- Masks *2 (One for adults and One for children)

Why are you choose Our nebulizer ?

Effective drug delivery: The nebulizer aims to convert liquid drugs into fine mist, making it easier to inhale and directly reach the lungs. This method ensures effective delivery of medication to the respiratory system and alleviates respiratory symptoms.

Suitable for various diseases: Atomizers can be used for various respiratory diseases, including acute and chronic diseases such as asthma attacks (such as COPD). They are usually used when using inhalers that are difficult or require higher levels.

Easy to use: Atomizers are usually user-friendly devices that can be operated by people of all ages, including children and the elderly. They usually involve simple settings and require minimal coordination to inhale.

Versatility: The nebulizer can adapt to different types of drugs, including bronchodilators, corticosteroids, and antibiotics. This versatility enables healthcare providers to prescribe the most suitable medication based on individual specific circumstances.

Continuous treatment: The nebulizer can provide continuous or longer treatment time, making it suitable for individuals who require long-term medication. This is particularly useful during acute exacerbation of the respiratory system.

MESH NEBULIZER HELP YOU HAVE BETTER HEALTH

Portable & Effective

- Quiet Working

Enjoy benefits from Our nebulizer

We are well aware that the health of the respiratory system is very important, especially for people with breathing problems. This is why our team is committed to researching better nebulizer. Our portable nebulizer has 2800 micro-holes, stable chip control and three adjustable modes to provide you with a soothing mist. Effectively release discomfort and help you breathe freely anytime, anywhere.

Atomization is fast, 0.2ml/min

The liquid particle diameter is $3\mu\text{m} - 4\mu\text{m}$, and the atomization rate is $\geq 0.2\text{ml/min}$, which can meet the requirements of the inhalation particle diameter and reduce the atomization waiting time.
