

High Accuracy DOVT CE Approved Rapid Test Kit For SARS-CoV-2 Antibody Detection At Home

Our Product Introduction

for more products please visit us on oxygenconcentratormedical.com

Basic Information

- Place of Origin: China
- Brand Name: DVOT
- Certification: CE/ISO
- Model Number: SARS-CoV-2
- Minimum Order Quantity: 800 test
- Price: 0.35 0.4USD
- Packaging Details: OPP Packing
- Delivery Time: 15-20 work days
- Payment Terms: D/P, T/T, Western Union, MoneyGram
- Supply Ability: 1000000pcs

Product Specification

- Specimen: Nasopharyngeal Swab/Nasal Swab
- Sensitivity: 97.5%
- Specificity: 99.1%
- Total Agreement: 98.7%
- Detection Time: 8-15 Minutes
- Shelf Life: 24 Months
- Highlight: Home Rapid Test Kit, SARS-CoV-2 Antibody Detection Kit, SARS-CoV-2 Rapid Test Kit

Product Description

DOVT CE Approved Rapid Test Kit SARS-CoV-2 Antibody Rapid Kit Home Use and high accuracy

Product Description

The DVOT SARS-CoV-2 Antigen Test Kit is used for the qualitative detection of SARS-CoV-2 nucleocapsid protein antigen in anterior nasal swab samples. The SARS-CoV-2 Antigen Test Kit is an in vitro diagnostic product designed for the rapid screening of novel coronavirus (SARS-CoV-2) infections. The kit achieves rapid and accurate diagnostic results by detecting viral antigens in patient respiratory samples (e.g., nasopharyngeal swabs). The product is designed to assist initial screening in healthcare facilities, clinics and home self-testing scenarios, providing timely and effective support for outbreak prevention and control.

Our Product Introduction

to

specificities

fast and convenient	Simple testing process, from sample collection to result reading in 8 minutes, greatly reducing testing time
High sensitivity and specificity	Ensure accuracy and reliability of test results
easy operation	User-friendly design, no complex equipment required, can be operated with simple training
Intuitive results	easy to read with color changes or visual markers directly displaying the test results

Product Components

- Test card: used to carry the sample and perform antigen-antibody reaction.
- Sample Buffer: Used to dilute and process the sample to increase the sensitivity of the test.
- Swab: Used to collect pharyngeal or nasal swab samples from the subject.
- Instruction manual: Detailed instructions on how to collect samples, perform the test and read the results.

Methods of use

1. Preparation of materials: Remove the test card, sampling swab, sample treatment solution and other auxiliary materials required.
2. Sample collection: According to the instruction manual, use the sampling swab to gently insert into the patient's nasal cavity or throat, and rotate it several times to collect a sufficient amount of sample.
3. Sample processing: Place the collected sample into the sample processing solution and mix thoroughly.
4. Detection: Take 2 drops of the treated sample into the designated area of the test card and wait for a specified time (e.g., 8 minutes).
5. Result Interpretation: Judge the result according to the color change or visual mark on the test card. If "Positive" is displayed, it means that SARS-CoV-2 antigen is present in the sample; if "Negative" is displayed, it means that the antigen is not detected; if the result is invalid or unclear, please follow the instructions for retesting or consultation. If the result is invalid or unclear, please follow the instructions for retesting or consult a professional.

About the Antigen Test Kit

It is intended for the vitro diagnostic qualitative detection of nucleocapsid protein antigen from SARS-CoV-2. It is intended for self-collected Nasal samples from individuals who are suspected of COVID-19 within the first seven days of symptom onset. Individuals of 2-13 years old should be tested under supervision of adult or tested by adult.

With this device, anyone can simply detect if they are suspected of infection with novel coronavirus. It is simpler and faster than PCR detection.

HAVE YOU EVER HAD SUCH CONCERNS?

Worried about inconvenient to test

- No hospitals or test site available nearby.
- Physical discomfort, queue for a long time to test.

Worried about the family

- Anyone in my family been infected?
- How to test elder and infants?

Worried about not get result immediately

- Long time waiting for a PCR test result.
- Want to know the result immediately.

Worried about infection

- Infection risk in crowded hospitals or test site.
- Are there are close contacts around you?

Let us **SOLVE** your troubles!

It can detect mutated virus

High accuracy detection of 98.92%

- Test result is available in 15 minutes.
- Self-testing is convenient at home, or anywhere else.
- Risk control for easy life and working.
- Shelf-life of 1.5 years, you can store for a long time.

Easy detection will make you feel ease, people around you also feel comfortable.

Simple steps, easy-handling for anybody!
